

Un_named

Basic storyboard

Step: 1

Profile page

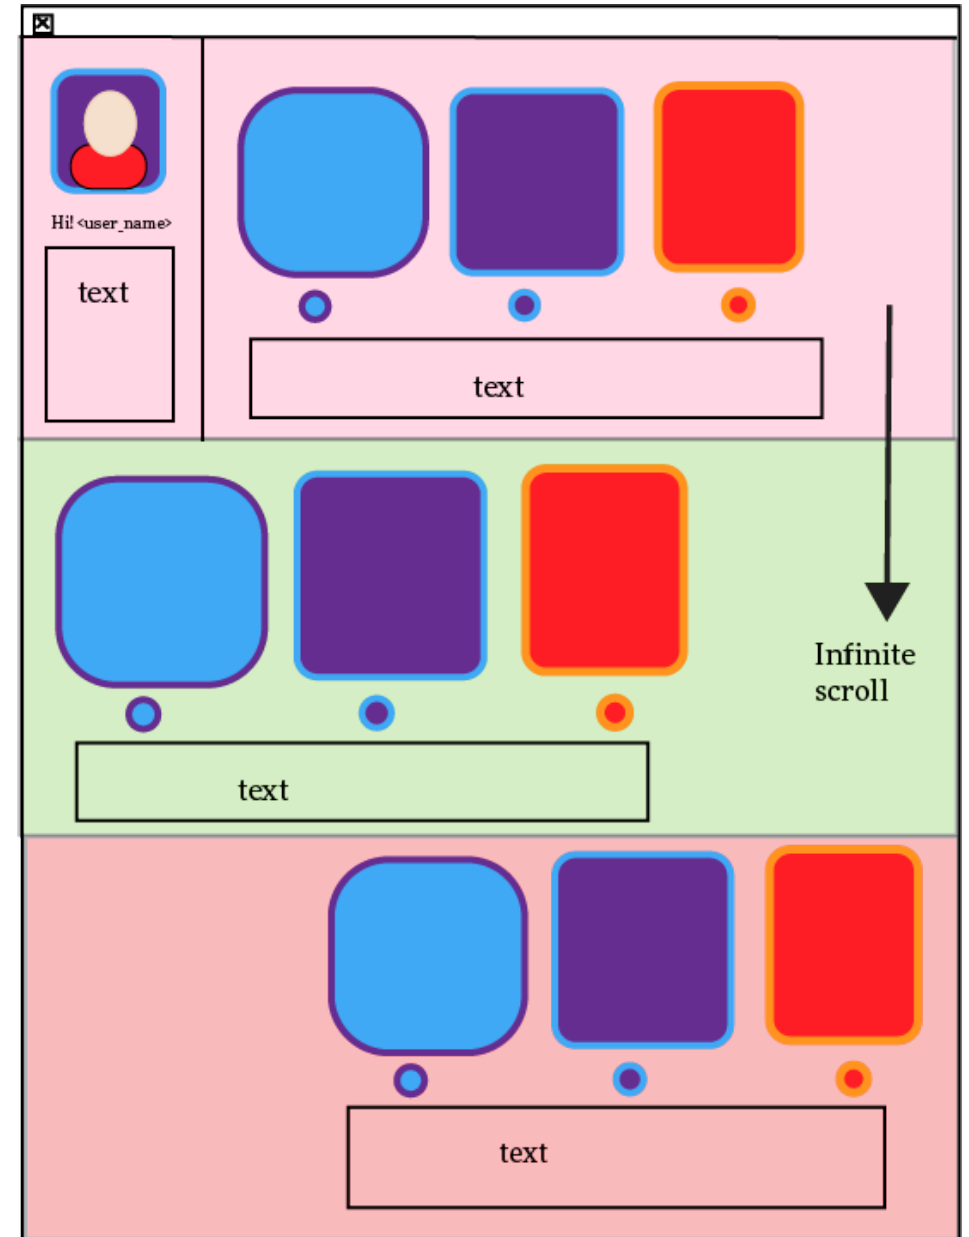

A wireframe of a profile page. It features a placeholder for a profile picture (a purple square with a blue border and a tan circle on a red shirt), a purple button labeled "Enter Name", and a consent checkbox with the text "I agree that my image may be used".

- Users create a profile picture with camera from computer
 - Pages function as a form with fields uploaded to database
 - Images are uploaded to profile_images folder in public_html
- Users write input their name
 - Images and name are linked in database
- Users check consent radio button
 - If they do not check button then information does not get uploaded (need to see if we can hide data or find solution to this)

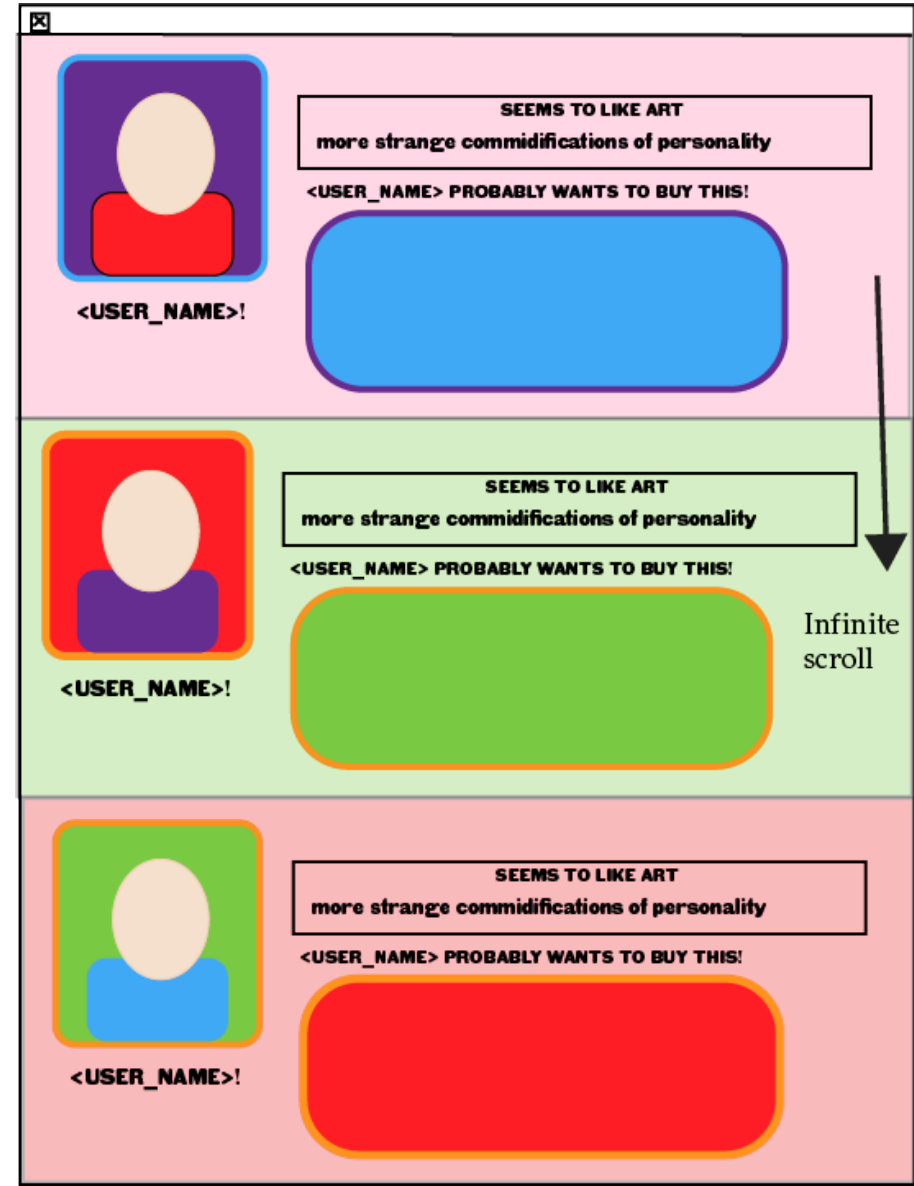

Step 2: Choices

- Users profile picture and username is on the next page
- Directions on what to do
- Users chooses different graphics based on prompting text with radio buttons
- One page with infinite scroll

Step 3: results

- Users results are displayed on a page with other players
 - Each user is given a write up of their attitudes towards art and what commodities they might enjoy based on their choices
 - Results are humorous/strange/satirical
- Possibility of a master page being projected on a wall

Twist

- Users are unaware that results are pre-programmed and based on only three choices
- Creates the idea of a large dynamic website, but only three results are show
 - Emphasizing corporations and sites that try to group users based on small bites of data
